DETAILED ACTION

Claim Rejections - 35 USC § 112

1. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

2. Claim 2 is rejected under 35 U.S.C. 112, first paragraph, as containing subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention. There is no support in the specification to describe what or where the locking connection between the securing means and securing elements is at the "height of application of vehicle crash stresses". Furthermore it is unclear how this relates to the rails or receiving tracks.

3. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

4. Claim 2 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

It is unclear what applicant is claiming by the securing means and securing elements and receiving tracks are "arranged at the height of application of vehicle crash stresses". The specification does not describe what structure comprises this arrangement.

Claim Rejections - 35 USC § 102

5. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

6. Claims 1-3 and 5 are rejected under 35 U.S.C. 102(b) as being anticipated by Miller et al. '684.

Miller et al. teaches a cargo space 20, receiving tracks 22, 24 that are rigidly anchored at 28 to the cargo space, securing means 34, 36 for a suitcase or box 26. The suitcase or box 26 has securing elements 52, 54 and actuation means 48 to lock with securing means 34, 36 to hold the suitcase/box firmly to the vehicle.

For claim 5, the rotating element(end near the top of the box/suitcase) and a transfer mechanism 50(hinge) allow for movement of the rotating element to translate and move the securing elements 52, 54.

To the degree that claim 2 is understood, Miller et al. teaches a locking connection between the securing elements and securing means that will hold during a crash.

Art Unit: 3727

7. Claims 1-4 are rejected under 35 U.S.C. 102(e) as being anticipated by Larsen et al.

Larsen et al. teaches a cargo space 20 with receiving tracks 16 having securing means, bar extending across the tracks 16, for holding suitcases/cargo accessories 43. The cargo accessory has securing elements 35 and actuation means 51 as shown in figure 5 to firmly hold the accessory to the vehicle. The tracks 16 are located recessed into the cargo space.

To the degree that claim 2 is understood, Larsen et al. teaches a locking connection between the securing elements and securing means that will hold during a crash.

Conclusion

8. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Van Ert et al., Yee, Mastrangelo et al., Hendricks, Bott, Janek, Farley, Lehrman, Liserre, Christensen, Warren Jr., the Japanese reference and the Great Britain reference teach similar locking connections for holding cargo accessories/luggage to a vehicle similar to what applicant is claiming.

Telephone inquiries regarding the status of applications or other general questions, by persons entitled to the information, "should be directed to the group clerical personnel and not to the examiners. In as much as the official records and applications are located in the clerical section of the examining groups, the clerical
